                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              JOURNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TITLE
                                                                                                                                 source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Genes were identified by a combination of three methods: Gene prediction programs including GRAIL (ftp://arthur.epm.ornl.gov/pub/xgrail), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gnomic.stanford.edu/GENSCANW.html), and NetPlantGene (http://gnomic.stanford.edu/GENSCANW.html), and NetPlantGene (http://www.cbs.dtu.dk/services/NetGene2/), searches of the complete sequence against a peptide database and plant EST databases at TIGR, and manual curations based on those analyses. Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/ERNAscan-SE/). Simple repeats were lidentified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/M/RepeatMasker.html). Genes are numbered from the top to the bottom of the chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Lin, X., Kaul, S., Rounsley, S.D., Shea, T.P., Benito, M.-I., Town, C.D., Fujii, C.Y., Mason, T.M., Bowman, C.L., Barnstead, M.E., Feldblyum, T.V., Buell, C.R., Ketchum, K.A., Lee, J.J., Ronning, C.M., Koo, H., Moffat, K.S., Cronin, L.A., Shen, M., VanAken, S.E., Umayam, L., Tallon, L.J., Gill, J.E., Adams, M.D., Carrera, A.J., Creasy, T.H., Goodman, H.M., Somerville, C.R., Copenhaver, G.P., Preuss, D., Mierman, W.C., White, O., Elsen, J.A., Salzberg, S.L., Fraser, C.M. and Venter, J.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              thale cress.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           66956
```

MAPPING: Clones were assigned to the YAC map by hybridization by M. Lodhi, Cold Spring Harbor Laboratories, and fingerprinted by M. Marra, WashU, to pick the best candidates for sequencing.

NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone

Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats were identified by repeatmasker (Arian Smit,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 (bases 1 to 110211)

production of apomictic seeds - useful in plant breeding Claim 27; pages 91-95; 123pp; English.

The sequence is that encoding SERK, a putative receptor kinase. It may be used as part of a method of producing apomictic seeds comprising: (a) transforming plant material with a nucleotide sequence encoding a protein which in active form in a cell or cell membrane renders the cell embryogenic; (b) regenerating the transformed material into plants or carpel-containing
                                                                                                                                                                                             V06591;

The apomictic seeds and embryos thus produced can be developed into plant progeny. This is useful in plant breeding programs. Controllable and reproducible apomixis provides coming advantages in plant improvement and cultivar development in the case that sexual plants are available as crosses with the apomictic plant. Apomixis provides for true-breeding, seed apomictic plant. Apomixis provides for true-breeding, seed propagated hybrids and could shorten and simplify the breeding programs to that selfing and progeny testing to produce and/or stabilise a desirable gene combination could be eliminated.

Apomixis allows plant breeders to develop cultivars with specific stable traits for such characteristics as height, seed and forage quality and maturity.

Seed and forage quality and maturity.

Pr Production of apomictic seeds - useful in plant breeding
PS Claim 21; Pages 40-46; 123pp; English.

CC The sequence is that encoding SERK, a putative receptor kinase.

CC It may be used as part of a method of producing apomictic seeds

CC comprising: (a) transforming plant material with a nucleotide

CC comprising: (a) transforming plant material with a nucleotide

CC cell membrane renders the cell embryogenic; (b) regenerating

CC cell membry osc. The apomictic seeds and embryos thus produced

CC plant parts; and (c) expressing the sequence in the vicinity

CC of the embryo sac. The apomictic seeds and embryos thus produced

CC can be developed into plant progeny. This is useful in plant

CC threeding programs. Controllable and reproducible apomixis provides

CC many advantages in plant improvement and cultivar development in

CC the case that sexual plants are available as crosses with the

CC apomictic plant. Apomixis provides for true-breeding, seed

CC process so that selfing and progeny testing to produce and/or

CC stabilise a desirable gene combination could be eliminated.

CC specific stable traits for such characteristics as height,

CS seed and forage quality and maturity.

Claim 26; Pages 64-67; 123pp; English.

The sequence is that encoding SERK, a purative receptor kinase.

It may be used as part of a method of producing apomictic seeds comprising; (a) transforming plant material with a nucleotide sequence encoding a protein which in active form in a cell or cell membrane renders the cell embryogenic; (b) regenerating the transformed material into plants or carpel-containing plant parts; and (c) expressing the sequence in the vicinity of the embryo sc. The apomictic seeds and embryos thus produced can be developed into plant progeny. This is useful in plant breeding programs. Controllable and reproducible apomixis provides many advantages in plant improvement and cultivar development in the case that sexual plants are available as crosses with the propagated hybrids and could shorten and simplify the breeding process so that selfing and progeny testing to produce and/or stabilise a desirable gene combination could be eliminated.

Apomixis allows plant breeders to develop cultivars with seed and forage quality and maturity.

                                                 New RRK polynucleotides and nucleic acid constructs - used for generating transgenic plants resistant to Xanthomonas Claim 14, Page 61-62, 67pp; English.
This invention describes a method for conferring disease resistants invention describes the use of novel genes and prote plants. The invention describes the use of novel genes and prote belonging to the Oryza longistaminata and Oryza sativa receptor kinase-like protein (RRK) Xa21 multigene family. Such genes from cassava, maize and tomato are also described. The genes and protesses the cassava, maize and tomato are also described. The genes and protesses the cassava, maize and tomato are also described.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
         New receptor kinase Bin1 involved in brassinolide signalling useful for promoting increased yield and disease resistance in plants and for modulating oocyte maturation

T plants and for modulating oocyte maturation

S Claim 8; Page 49-52; 72pp; English.

In this DNA sequence codes for a novel plant steroid receptor kinase, the synthesis of the plant steroid hormone, brassinolide. 18 New C arabidopsis dwarf mutants were identified that lacked the ability to respond to brassinolide, and were named bin mutants. The bin1 mutations were used to map the gene to a small interval on Arabidopsis chromosome 4. Bin1 was cloned by map-based cloning. The Bin1 polynucleotide was identified within this interval by sequencing the wild-type and mutant alleles of this nucleic acid.

Overexpression of Bin1 in transgenic plants provides plants

Expression of Bin1 may also increase resistance to pesticides. Inhibition of Bin1, e.g. using antisense oligonucleotides (AON), is used to render plants male-sterile, and to reduce their stature or yield, e.g. for creating dwarf varieties. Since Bin1 homologues may be involved in regulation of the menstrual cycle and uterine function, Bin1, antibodies and AON may be useful as contraceptives, for improving success of in vitro fertilisation and to prevent premature labour. Transgenic animals are also provided, and are models for studying steroid-receptor interactions or can be used to screen for therapeutic agents.
